Chef Bono, A Virtual Chef Asistant

Buse Şahin, Berkan Gökgöz, Yelda Sıla Mumcu, Eren Serdar -- Mentor: Tansel Dökeroğlu

Abstract

Chef Bono is an AI powered virtual chef that eases the process of cooking/ preparing by tag (vegan, gluten free, etc.), score (protein amount, etc.), semantic based searches of recipes and being present at every step of the cooking/preparing by watching the users kitchen table and communicating with them to provide the steps and feedbacks.

Introduction

Voice Interaction

Bono provides conversational recipe guidance and cooking assistance.

AI

Users communicate naturally with Bono during cooking.

Camera Support

The system captures frames and analyzes cooking situations.

Step-by-Step Guidance

Users can follow recipe steps, repeat instructions, and move through the cooking process easily.

Seamless Hybrid Speech Processing (STT & TTS)

User can communicate with Bono and query its database with natural language which has more than 20k+ categorized recipes

Smart Dietary Recommendation System

The recipes tagged with:

- Vegetarian
- Vegan
- Gluten-Free
- Dairy-Free
- Nut-Free
- High-Fiber
- Weight Loss Diet
- Muscle Gain / Bulking
- Balanced Healthy Nutrition

Nutritional Scoring System

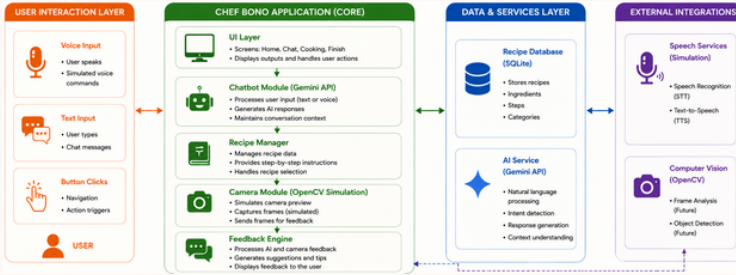

The recipes scored with:

- Carb Score
- Protein Score
- Fat Score
- Calorie Score
- Sugar Score
- Spice Level Score

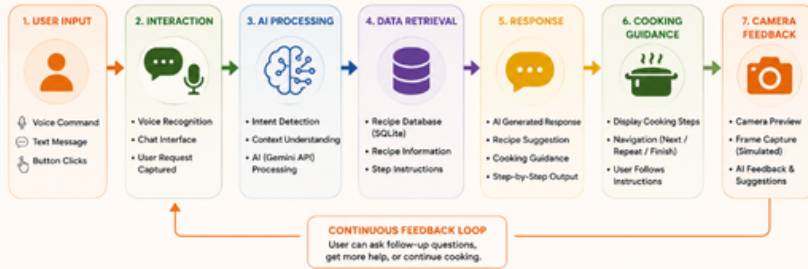

Image Recognition

Bono watches users kitchen table to help with preparation/cooking by recognizing the state of food, ingredient, and the kitchen environment.
